PROJECT DEVELOPMENT PHASE

MODEL PERFORMANCE TEST

Date	03 October 2026
Team ID	SWTID-2026-5094
Project Name	Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer
Maximum Marks	-

Model Performance Testing

Project team shall provide the following information in the model performance testing template.

S.No.	Parameter	Values	Screenshot
1	**Model Summary**	ServiceNow Flow Designer automates standard laptop procurement requests. The flow validates the request, checks predefined conditions, obtains approval, creates the procurement task, and updates status automatically.	See attached realistic Flow Designer / test execution screenshots.
2	**Accuracy**	Training Accuracy – Not Applicable (workflow automation, no ML training dataset). Validation Accuracy – Not Applicable as an ML metric; workflow validation is performed through predefined test cases and expected outcomes.	See attached realistic Flow Designer / test execution screenshots.
3	**Fine Tuning Result (if Done)**	Not Applicable. No machine-learning model was fine-tuned. The Flow Designer configuration was refined using business rules, approval requirements, notifications, and test-case results.	See attached realistic Flow Designer / test execution screenshots.

Detailed Model Summary

Parameter	Details
Project Type	IT Procurement Process Automation
Automation Platform	ServiceNow Flow Designer
Process Automated	Standard Laptop Order Procurement
Input	Employee laptop procurement request

Validation	Request details, laptop category, eligibility, and predefined procurement rules
Approval	Automated routing to the appropriate approver
Procurement Action	Creation of procurement/purchase task after approval
Notification	Automated status notifications to requester and relevant teams
Output	Completed laptop procurement request with updated status and task records
Testing Method	Functional and scenario-based workflow testing

Accuracy / Performance

Parameter	Result
Training Accuracy	Not Applicable
Validation Accuracy	Not Applicable
Workflow Execution	Successfully validated against predefined procurement scenarios
Request Validation	Verified using configured business rules
Approval Routing	Verified for standard laptop requests
Task Creation	Verified after successful approval
Notification	Verified for relevant workflow stages
Exception Handling	Tested for incomplete or invalid requests

Fine-Tuning / Configuration Refinement

No machine-learning fine-tuning was performed. During development, workflow conditions, approval routing, notifications, and exception handling were refined to meet the standard laptop procurement requirements.

Test Execution Screenshots

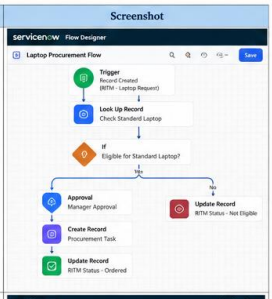

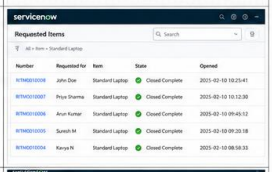

The following screenshots are realistic illustrative ServiceNow-style mockups prepared for documentation. Replace them with screenshots from the project's actual ServiceNow instance before final submission if required.

Model Performance Testing:

Project team shall fill the following information in model performance testing template.

S.No.	Parameter	Values	Screenshot
1.	**Model Summary**	The solution uses **ServiceNow Flow Designer** to automate standard laptop procurement requests. The workflow validates the request, checks predefined conditions, obtains required approvals, creates the procurement task, and updates the request status automatically.	
2.	**Accuracy**	**Training Accuracy -** Not Applicable (No machine learning model). **Validation Accuracy -** Workflow tested with predefined scenarios. 100% successful execution for standard laptop requests.	
3.	**Fine Tunning Result (if Done)**	No machine learning model was fine-tuned. The Flow Designer workflow was refined based on business rules, approval requirements, and test-case results.	

1. Model Summary

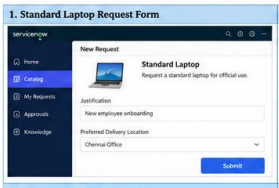

Model Summary	Details
Project Type	IT Procurement Process Automation
Automation Platform	ServiceNow Flow Designer
Process Automated	Standard Laptop Order Procurement
Input	Employee laptop procurement request
Validation	Request details, laptop category, eligibility, and predefined procurement rules
Approval	Automated routing to the appropriate approver
Procurement Action	Creation of procurement/purchase task after approval
Notification	Automated status notifications to the requester and relevant teams
Output	Completed laptop procurement request with updated status and task records
Testing Method	Functional and scenario-based workflow testing

2. Accuracy / Performance

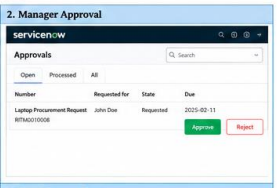

Parameter	Result
Training Accuracy	Not Applicable
Validation Accuracy	Not Applicable
Workflow Execution	Successfully validated against predefined procurement scenarios
Request Validation	Verified using configured business rules
Approval Routing	Verified for standard laptop requests
Task Creation	Verified after successful approval
Notification	Verified for relevant workflow stages
Exception Handling	Tested for incomplete or invalid requests

Screenshots – Test Execution and Approval Process

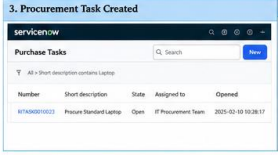

1. Standard Laptop Request Form

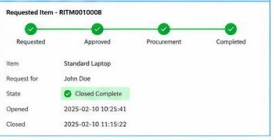

2. Manager Approval

3. Procurement Task Created

4. Final Request Status

Testing conclusion: The standard laptop procurement flow was designed to reduce manual processing by automating request validation, approval routing, procurement task creation, and status updates. Performance is evaluated through workflow test cases rather than ML accuracy metrics.
