# PROJECT DEMONSTRATION

## Project Title

**Streamlining IT Procurement: Automating Standard Laptop Orders with Flow Designer**

## 1. Introduction

The project demonstrates an automated IT procurement process for **standard laptop orders** using **ServiceNow Flow Designer**.

Instead of handling laptop requests manually through emails and separate approvals, the system creates a structured workflow that automatically manages the request, approval, procurement task, notifications, and order status.

## 2. Problem Statement

In a manual IT procurement process, employees submit laptop requests through emails or forms. IT teams then manually verify the request, obtain approval, create procurement tasks, and communicate the status to the employee.

This process can result in:

- Manual data entry
- Delayed approvals
- Repeated communication
- Difficulty tracking requests
- Increased administrative effort

Therefore, an automated workflow is required to simplify and standardize the procurement process.

## 3. Project Objective

The main objective is to automate the process of ordering a **standard laptop** using **ServiceNow Flow Designer**.

The system should:

1. Accept a laptop request.
2. Validate the request.
3. Check laptop availability.
4. Send the request for approval.
5. Create a procurement task after approval.
6. Notify the employee about the request status.
7. Track the laptop order until completion.

# 4. Technologies Used

| Component | Technology |
|---|---|
| Platform | ServiceNow |
| Automation Tool | Flow Designer |
| Workflow | Automated Procurement Flow |
| Request Management | ServiceNow |
| Approval | ServiceNow Approval Action |
| Notification | ServiceNow Notifications |
| Testing | ServiceNow Flow Designer Test |

# 5. Demonstration Workflow

The complete demonstration follows this process:

**Employee Request**

↓

**Request Validation**

↓

**Laptop Availability Check**

↓

**Manager Approval**

↓

**Procurement Task Creation**

↓

**Laptop Order Processing**

↓

**Status Notification**

↓

**Order Completion**

# 6. Demonstration – Step 1: Create Laptop Request

First, the employee submits a standard laptop request.

## Sample Request Details

- **Employee Name:** Monisha A
- **Employee ID:** EMP001
- **Department:** IT

- **Laptop Type:** Standard Laptop
- **Reason:** New Employee
- **Request Date:** 15 February 2025

The employee submits the request.

**Expected Result:**

A new laptop procurement request is created successfully.

# 7. Demonstration – Step 2: Validate Request

The submitted request is checked by the system.

The workflow verifies:

- Employee details
- Department
- Laptop requirement
- Request information
- Standard laptop availability

If the information is valid, the workflow continues to the approval stage.

**Expected Result:**

The request passes validation successfully.

# 8. Demonstration – Step 3: Trigger Flow Designer

The **Flow Designer** automatically starts the workflow when the laptop request is submitted.

### Flow Structure

**Trigger:**

Laptop procurement request is created.

**Actions:**

1. Get request details
2. Validate request
3. Check laptop availability
4. Request approval
5. Create procurement task
6. Send notification
7. Update request status

This removes the need for manually performing each step.

# 9. Demonstration – Step 4: Manager Approval

After validation, the request is sent to the appropriate IT manager for approval.

The manager can:

- **Approve** the request
- **Reject** the request

### If Approved:

The workflow continues to procurement.

### If Rejected:

The request status is updated as rejected and the employee is notified.

# 10. Demonstration – Step 5: Create Procurement Task

When the manager approves the request, Flow Designer automatically creates a procurement task.

### Sample Procurement Task

**Task:** Procure Standard Laptop

**Requested By:** Monisha A

**Laptop Type:** Standard Laptop

**Priority:** High

**Status:** Open

The procurement team can then process the laptop order.

# 11. Demonstration – Step 6: Send Notification

The workflow automatically sends a notification to the employee.

### Sample Notification

**Laptop Request Update**

Your standard laptop request has been approved and forwarded to the IT procurement team.

**Request Status:** Approved

**Next Step:** Procurement Processing

This provides the employee with an automatic status update.

# 12. Demonstration – Step 7: Track Order

The procurement team updates the order status during the process.

### Order Status

**Requested → Approved → Procurement → Ordered → Delivered → Completed**

The status allows the IT team to track the request from beginning to completion.

# 13. Demonstration – Step 8: Dashboard

The dashboard provides an overview of laptop procurement requests.

It can display:

- Total Requests
- Pending Requests
- Approved Requests
- Rejected Requests
- Completed Requests

- Orders in Procurement

This helps IT administrators monitor procurement activities.

# 14. Testing

The workflow is tested using different scenarios.

| Test Case | Expected Result | Status |
|---|---|---|
| Submit valid laptop request | Request created | Pass |
| Submit incomplete request | Validation identifies missing information | Pass |
| Approve request | Procurement task created | Pass |
| Reject request | Request marked rejected | Pass |
| Approved request | Employee receives notification | Pass |
| Update order status | Request status updated | Pass |
| Complete order | Request marked completed | Pass |

# 15. Final Output

The final demonstration shows a complete automated laptop procurement workflow.

**Employee submits request**

↓

**Flow Designer triggers automatically**

↓

**Request is validated**

↓

**Manager approval is requested**

↓

**Procurement task is created**

↓

**Employee receives notification**

↓

**Order is tracked**

↓

**Laptop is delivered**

↓

**Request is completed**

# 16. Benefits

The proposed automation provides:

- Reduced manual work
- Faster request processing
- Automated approvals
- Automatic task creation
- Automatic notifications
- Better request tracking
- Standardized procurement process
- Improved visibility of procurement status

# 17. Conclusion

The project demonstrates how **ServiceNow Flow Designer** can automate the standard laptop procurement process. The workflow connects request submission, validation, approval, procurement, notification, and order tracking into a single automated process.

The demonstration shows how automation can make IT procurement more **structured, trackable, and efficient** while reducing repetitive manual activities.
